test $\mathfrak{n} \in \mathbb{Z}$

$$f(a) = \frac{1}{2\pi i} \cdot \oint_{\gamma} \frac{f(z)}{z - a} dz$$

 $\mathcal{L}(\mathcal{A})$

Algorithm 1: 線形篩

```
1 function Linear-sieve(n)
                                                                                                                                                   \triangleright O(n) time
         input: n \in \mathbb{N}
         output: (lpf(i))_{i=0}^n \in \mathbb{N}^{n+1}

    ▷ a list of primes in ascending order

2
         l \leftarrow (1)_{i=0}^n
                                                                                                                                                   \rhd \, l_{\mathfrak{i}} = lpf(\mathfrak{i})
         for i \leftarrow (2, \dots, n) do
               if l_i = 1 then
                    l_i \leftarrow i
                  _ p ← (i)
 7
               \text{for } j \leftarrow p \text{ do}
 8
                     if j > \min\{l_i, \lfloor n/i \rfloor\} then break
10
         return l
11
```

```
fn main() {    // 119 \cdot 2^{23} + 1 = 998244353    println!("{}", 119 << 23 | 1); }
```

todo: 適当なサンプルとして使える擬似コードや数式などを用意する。
